## Abstract

One or two sentences providing a **basic introduction** to the field, comprehensible to a scientist in any discipline.

Two to three sentences of **more detailed background**, comprehensible to scientists in related disciplines.

One sentence clearly stating the **general problem** being addressed by this particular study.

One sentence summarizing the main result (with the words “**here we show**” or their equivalent).

Two or three sentences explaining what the **main result** reveals in direct comparison to what was thought to be the case previously, or how the main result adds to previous knowledge.

One or two sentences to put the results into a more **general context**.

Two or three sentences to provide a **broader perspective**, readily comprehensible to a scientist in any discipline.

## Long Title Example Manuscript

This is a paragraph where I talk about Feld and Born (2017). I can cite the paper in the middle of a sentence, as in the previous sentence. Or I can cite it at the end of a sentence, like in this example (Feld & Born, 2017). All information about the paper are stored in my bibliography file (`bib_file.bib`). When I cite the paper in my manuscript, it will automatically be added to the reference list at the end of my paper.

## Results

In the result section, I can talk about my data. For example, I can report the mean sepal length of the flowers in my iris data, ( $M = 5.84$ ,  $SD = 0.83$ ). I can also report the results of a t-test where I test for differences in sepal length between the species *setosa* and *versicolor*  $t(86.54) = -10.52$ ,  $p < .001$ ,  $d = -2.10$ . Furthermore, you can find a scatter plot in Fig. 1.
